Efforts undertaken during the year to reduce the volume and toxicity of waste generated:

During 2011 Bridgeport Fittings, Inc. continued its pollution prevention/waste minimization efforts, and has continued to work closely with its chemical suppliers to minimize waste.

Changes in volume and toxicity of waste actually achieved during the year in comparison to previous years:

The volume of metal hydroxide exported during record year 2011 decreased by approximately 27% since record year 2010, due to an increasing quantity of waste being disposed of within the United States. The actual generation of sludge, however, has increased, mainly due to increased efficiency of the wastewater treatment plant; improvement in wastewater quality has resulted in a higher volume of sludge generation.
